# 

Лабораторная работа №5

По дисциплине «СПП» за 5-й семестр

Выполнил: студент 2 курса группы ПО-3 (1) Афанасьев В.В.

Проверил: Крощенко А.А. **Цель работы:** приобрести базовые навыки в области объектно-ориентированного проектирования на языке программирования С#.

## Вариант: 2

### Задание 1:

Реализовать абстрактные классы или интерфейсы, а также наследование и полиморфизм для следующих классов:

2) interface Abiturient abstract class Student class Student Of Faculty.

#### Задание 2:

В следующих заданиях требуется создать суперкласс (абстрактный класс, интерфейс) и определить общие методы для данного класса. Создать подклассы, в которых добавить специфические свойства и методы. Часть методов переопределить. Создать массив объектов суперкласса и заполнить объектами подклассов. Объекты подклассов идентифицировать конструктором по имени или идентификационному номеру. Использовать объекты подклассов для моделирования реальных ситуаций и объектов.

2) Создать суперкласс Учащийся и подклассы Школьник и Студент. Создать массив объектов суперкласса и заполнить этот массив объектами. Показать отдельно студентов и школьников.

#### Задание 3:

В задании 3 ЛР №4, где возможно, заменить объявления суперклассов объявлениями абстрактных классов или интерфейсов.

## Код программы:

1)

```
using System;
namespace task1
    class Program
        static void Main(string[] args)
            StudentOfFaculty student = new StudentOfFaculty(5, 18);
            Console.WriteLine("Years: " + student.GetYears());
            Console.WriteLine("Experience: " + student.GetExperience());
    }
    public interface IAbiturient
